ComplexQuantumSystems

Open call for PhD fellowships in experimental and theoretical Quantum Science and Technology

Application Deadline: 31 December 2017

Hearings in Vienna: 19-20 March 2018

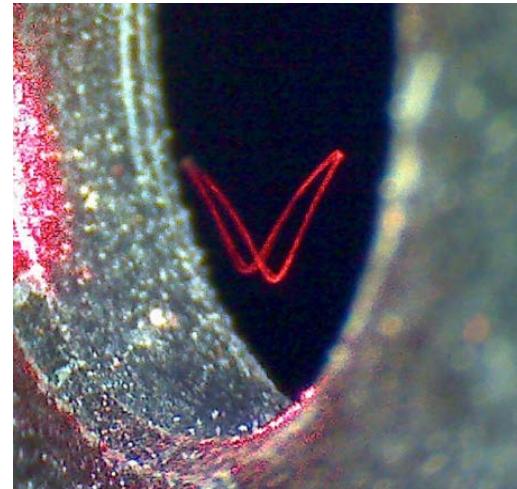

Apply online via: www.coqus.at

The Vienna Doctoral Programme on Complex Quantum Systems

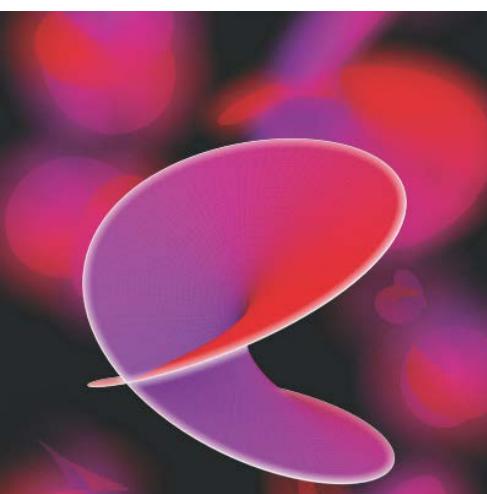

Join one of the most vibrant places for quantum science in Europe!

The Vienna Doctoral Program on Complex Quantum Systems (CoQuS) has been a training center for more than a hundred students the past 10 years. Our 15 different research groups are working on the forefront of the developments in modern quantum science and technology at six different locations in and around Vienna.

Your training and research ranges from the most fundamental aspects of quantum science to advanced applications of quantum technologies – in both theory and experiment.

We are interested in questions such as

How can we understand the structure of Quantum Theory?

Why do we encounter classicality?

How can we explore the interface between quantum physics and gravity?

Which mesoscopic properties emerge from the dynamics of complex quantum systems?

We are advancing the technologies for Quantum networks, Quantum interfaces, Quantum information processing (simulation and computing) and Quantum enhanced application of metrology and sensing.
